1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use this apparatus near water.
6. Clean only with dry cloth.
7. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.

9. Only use attachments/accessories specified by the manufacturer.
10. Unplug this apparatus during lightning storms or when unused for long periods of time.
11. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
 - Caution should be taken when using earphones or headphones with the product because excessive sound pressure (volume) from earphones or headphones can cause hearing loss.
 - If you are experiencing problems with this product, contact TEAC for a service referral. Do not use the product until it has been repaired.

WARNING

- To prevent possible hearing damage, do not listen at high volume levels for long periods.

CAUTION

- Do not expose this apparatus to drips or splashes.
- Do not place any objects filled with liquids, such as vases, on the apparatus.
- Do not install this apparatus in a confined space such as a book case or similar unit.
- If the product uses batteries (including a battery pack or installed batteries), they should not be exposed to sunshine, fire or excessive heat.
- CAUTION for products that use replaceable lithium batteries: there is danger of explosion if a battery is replaced with an incorrect type of battery. Replace only with the same or equivalent type.

CAUTIONS ABOUT BATTERIES

This product uses batteries. Misuse of batteries could cause a leak, rupture or other trouble. Always abide by the following precautions when using batteries.

- Never recharge non-rechargeable batteries. The batteries could rupture or leak, causing fire or injury.
- When installing batteries, pay attention to the polarity indications (plus/minus (⊕/⊖) orientation), and install them correctly in the battery compartment as indicated. Putting them in backward could make the batteries rupture or leak, causing fire, injury or stains around them.
- When you store or dispose batteries, isolate their terminals with insulation tape or something like that to prevent them from contacting other batteries or metallic objects.
- When throwing used batteries away, follow the disposal instructions indicated on the batteries and the local disposal laws.
- Do not use batteries other than those specified. Do not mix and use new and old batteries or different types of batteries together. The batteries could rupture or leak, causing fire, injury or stains around them.
- Do not carry or store batteries together with small metal objects. The batteries could short, causing leak, rupture or other trouble.
- Do not heat or disassemble batteries. Do not put them in fire or water. Batteries could rupture or leak, causing fire, injury or stains around them.
- If the battery fluid leaks, wipe away any fluid on the battery case before inserting new batteries. If the battery fluid gets in an eye, it could cause loss of eyesight. If fluid does enter an eye, wash it out thoroughly with clean water without rubbing the eye and then consult a doctor immediately. If the fluid gets on a person's body or clothing, it could cause skin injuries or burns. If this should happen, wash it off with clean water and then consult a doctor immediately.
- The unit power should be off when you install and replace batteries.
- Remove the batteries if you do not plan to use the unit for a long time. Batteries could rupture or leak, causing fire, injury or stains around them. If the battery fluid leaks, wipe away any fluid on the battery compartment before inserting new batteries.
- Do not disassemble a battery. The acid inside the battery could harm skin or clothing.

Quick Start Guide

Connecting the included mics

The included mics can be connected in two ways.

X-Y connection

This enables recording with a clear stereo field and reduced phase difference.

A-B stereo connection

This enables recording with a wide left-right stereo field.

1. Connect the mics so that their the metallic discs face the same direction as the touchscreen.

2. Turn their locking rings to fix them in place.

The included mics become usable by turning their lock rings completely until they are tight.

The included mics will not be recognized if their lock rings have not been turned completely.

Always use the included mics together as a pair.

NOTE

- Reverse these procedures to disconnect the mics.
- The angles of the included mics cannot be adjusted.
- The included mics cannot be rotated.

TIP

Input jacks 1/2 support plug-in power and can be used to connect lavalier mics with standard 3.5mm (1/8") TRS plugs (Tip: HOT, Ring: COLD, Sleeve: GND).

Inserting microSD cards

Open the microSD slot cover and insert a microSD card.

NOTE

microSD cards are delicate media.

In order to avoid damaging microSD cards, take the following precautions when handling them.

- Do not leave them in extremely hot or cold places.
- Do not leave them in extremely humid places.
- Do not let them get wet.
- Do not put things on top of them or twist them.
- Do not hit them.
- Do not remove or insert them during recording, playback, data transmission or other access.
- When transporting them, put them into cases, for example.

Powering the unit

This unit can be powered in two ways: with AA batteries or by external power using the USB port.

Using AA batteries

1. Remove the battery compartment cover, and insert 4 AA batteries with their ⊕ and ⊖ marks oriented as shown.
2. Reattach the battery compartment cover.

NOTE

- This unit cannot recharge Ni-MH batteries. Use a commercially available recharger.
- The included alkaline batteries are for confirming operation of the unit and might not last very long.

Using external power

Connect the USB port on the unit to an external power supply.

This illustration below is an example of connecting a PS-P520U AC adapter (sold separately) to the unit.

TASCAM PS-P520U (sold separately)

CAUTION

We highly recommend using the AC adapter designed for use with this unit (PS-P520U sold separately). When using another external power supply, use one with the following specifications.

- Supplied voltage: 5 V
- Supplied current: 1.5A or more

Using an external power supply with specifications other than the above could cause malfunction, overheating, fire or other problems.

If anything abnormal occurs, stop use and contact the retailer where you purchased the unit or a TEAC service center to request repair.

NOTE

- If an external power supply that provides current less

than 1.5 A is connected, the unit will automatically enable the POWER SAVE MODE, restricting some functions.

- When using the factory default setting, if an external power supply is connected, power from it will be used even if batteries are also installed.

Power supply settings can be changed with the GENERAL SETTINGS screen > POWER/DISPLAY page > POWER SOURCE SELECT item.

- See the Reference Manual for details.

Turning the power on and off

Turning the power on

Slide the ϕ /I/HOLD switch toward ϕ /I until the display is activated. Then, release the switch.

When the unit starts up, the touchscreen display becomes active.

The first time the unit is started, the LANGUAGE screen will open. From the second time, the HOME screen of the app selected on the LAUNCHER screen when the unit was last turned off will reopen.

Turning the power off

Slide the ϕ /I/HOLD switch toward ϕ /I until the display is deactivated. Then, release the switch.

Setting the language, date and time

Selecting the language

The first time the unit is turned on after purchase, the LANGUAGE screen will open.

1. Swipe the screen vertically to find the desired language.

Options

ENGLISH: Use English (default setting)

日本語: Use Japanese

FRANCAIS: Use French

ESPAÑOL: Use Spanish

DEUTSCH: Use German

ITALIANO: Use Italian

中文: Use Chinese

한글: Use Korean

русский язык: Use Russian

2. Tap the desired language to set it.

NOTE

The language setting can be set again using the GENERAL SETTINGS screen > SYSTEM page > LANGUAGE item. See the Reference Manual for details.

- Date and time settings can also be changed using the GENERAL SETTINGS screen > SYSTEM page > DATE/TIME item. (see "Power will not turn on" on page 40)

Formatting (initializing) microSD cards

The following message will appear if an unformatted card is loaded.

Tap QUICK FORMAT or ERASE FORMAT to start formatting.

- We recommend using ERASE FORMAT when formatting microSD cards the first time they are used with this unit.
- After formatting completes successfully, the LAUNCHER (app selection) screen will open.

CAUTION

Formatting will erase all data on a microSD card.

Back up to a computer, for example before formatting a card.

NOTE

- Formatting can also be executed using the GENERAL SETTINGS screen > SYSTEM page > MEDIA FORMAT item. (see "Power will not turn on" on page 40)
- Using the ERASE FORMAT option might improve writing performance that has decreased due to repeated use. If "Write error REC continue" or "Card slow Check BOF MARK" appears during recording, format the card using the ERASE FORMAT option.
- ERASE FORMAT checks the memory for errors while formatting, so it takes more time than QUICK FORMAT.

Basic screen operations

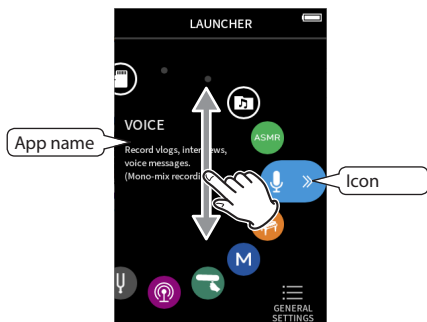

Functions can be set and adjusted by tapping, swiping and sliding on the touchscreen of this unit.

The first time the unit is started, after setting the language, date and time, the LAUNCHER screen will open.

Recording operation flow

This unit has Recording Guide¹ and REC Pause² functions. Depending on their on/off settings, pressing buttons will have the following effects.

¹ The Recording Guide function can only be used with the MANUAL app. With apps other than the MANUAL app, the Recording Guide function will be disabled regardless of its on/off setting.

² This unit has a REC Pause function that causes it to start monitoring the input signal when the REC [●] button is pressed. This function can be used with all recording apps. The REC Pause function can be used to reduce power consumption when recording is stopped. In addition, a recording can be started and paused repeatedly without stopping to save it as a single file. The REC Pause function is off when shipped new from the factory. When the REC Pause function is off, the input signal is always monitored when a recording app is active. When the REC Pause function is on, the input signal is only monitored when the Recording Guide function is active, recording is paused or recording is in progress. The REC Pause function can be set on the GENERAL SETTINGS screen > REC SETTINGS page.

Troubleshooting

If you are having trouble with the operation of this unit, please check the following before seeking repair. If these measures do not solve the problem, please contact the store where you purchased this unit or TASCAM customer support service.

Power will not turn on

- Confirm that the ϕ /I/HOLD switch is not set to HOLD.
- Confirm that batteries are installed correctly.
- Confirm that the TASCAM PS-P520U AC adapter (sold separately) power plug and the USB connector are securely connected. The unit might not operate properly through a USB hub.

The unit turns off automatically

- Confirm that the automatic power saving function is disabled.
 - The automatic power saving function can be turned on/off using the GENERAL SETTINGS screen > POWER/DISPLAY page > AUTO POWER SAVE item.
 - Since this unit complies with the European Standby Power Regulations (ErP), the automatic power saving function operates regardless of whether the unit is being powered by an AC adapter or batteries. If you do not want to use the automatic power saving function, set it to "OFF". (The factory default setting is "30 min".)

Operation is not possible using the unit controls

- Confirm that the ϕ /I/HOLD switch is not set to HOLD.
- When the microSD card reader function is active on the display, other operation is not possible.

The microSD card is not recognized

- Confirm that the microSD card is inserted completely.

No sound is output

- Confirm the unit's headphone/speaker output level.
- Check the monitoring system connections and volume level.
- No sound is output from the speaker in the following conditions.
 - The Ω / \square (headphone/speaker) volume is set to "0".
 - GENERAL SETTINGS screen > I/O SETTINGS page > SPEAKER is set to "OFF" (see "GENERAL SETTINGS screen" on page 35)
 - The unit is recording or in recording standby
 - The LINE OUT or headphones jack is in use.

Recording is not possible

- Confirm that the microSD card has enough open space.
- Recording becomes impossible when the total number of files reaches 5000.

The input sound is extremely quiet or loud

- Check input level settings. (see "Recording and playing files" on page 33)
- Check the output levels of connected external equipment.

A file cannot be deleted

- A protected (read only) file cannot be erased.

This unit's files do not appear on the computer

- Confirm that the unit is properly connected to the computer using its USB port. The unit might not operate properly if connected through a USB hub.
- Confirm that the unit screen shows "microSD card reader".

The wrong language was set accidentally

- Slide the ϕ /I/HOLD switch toward the ϕ /I icon until the unit turns off. Then, while pressing and holding the HOME [■] button, slide the ϕ /I/HOLD switch toward the ϕ /I icon again.
The language selection menu will appear, and you will be able to select the language.

Noise is occurring

- If this unit is near a TV, radio, power amplifier or other device with a large transformer, noise could occur with this unit or other devices nearby. (see "Precautions for placement and use" on page 24)

The built-in speaker volume is low

- Turn the Ω / \square (headphone/speaker) volume in the direction that increases the number.
- If input levels were low during recording, it might be difficult to hear even when the speaker is at its maximum volume. If the maximum input level during recording is close to 0 dB, the built-in speaker will output at near maximum volume
- If more volume is needed, connect an external speaker with a built-in amp or an amp with a speaker connected to it.

The date/time is incorrect

- They can be set again using the GENERAL SETTINGS screen > SYSTEM page > DATE/TIME item. (see "GENERAL SETTINGS screen" on page 35)
